

# Change Analysis

Another experiment to look at rate of change. Idea here is to compare the reported change against the cumulative sum.

## Extract daily changes

### Daily Cases

## Daily Deaths

## Change over Cumulative Sum

### Change in Cases over Cumulative Sum

Use the log of the cumulative sum to better scale the values.

Covid cases rate of change by state – linear/log-x

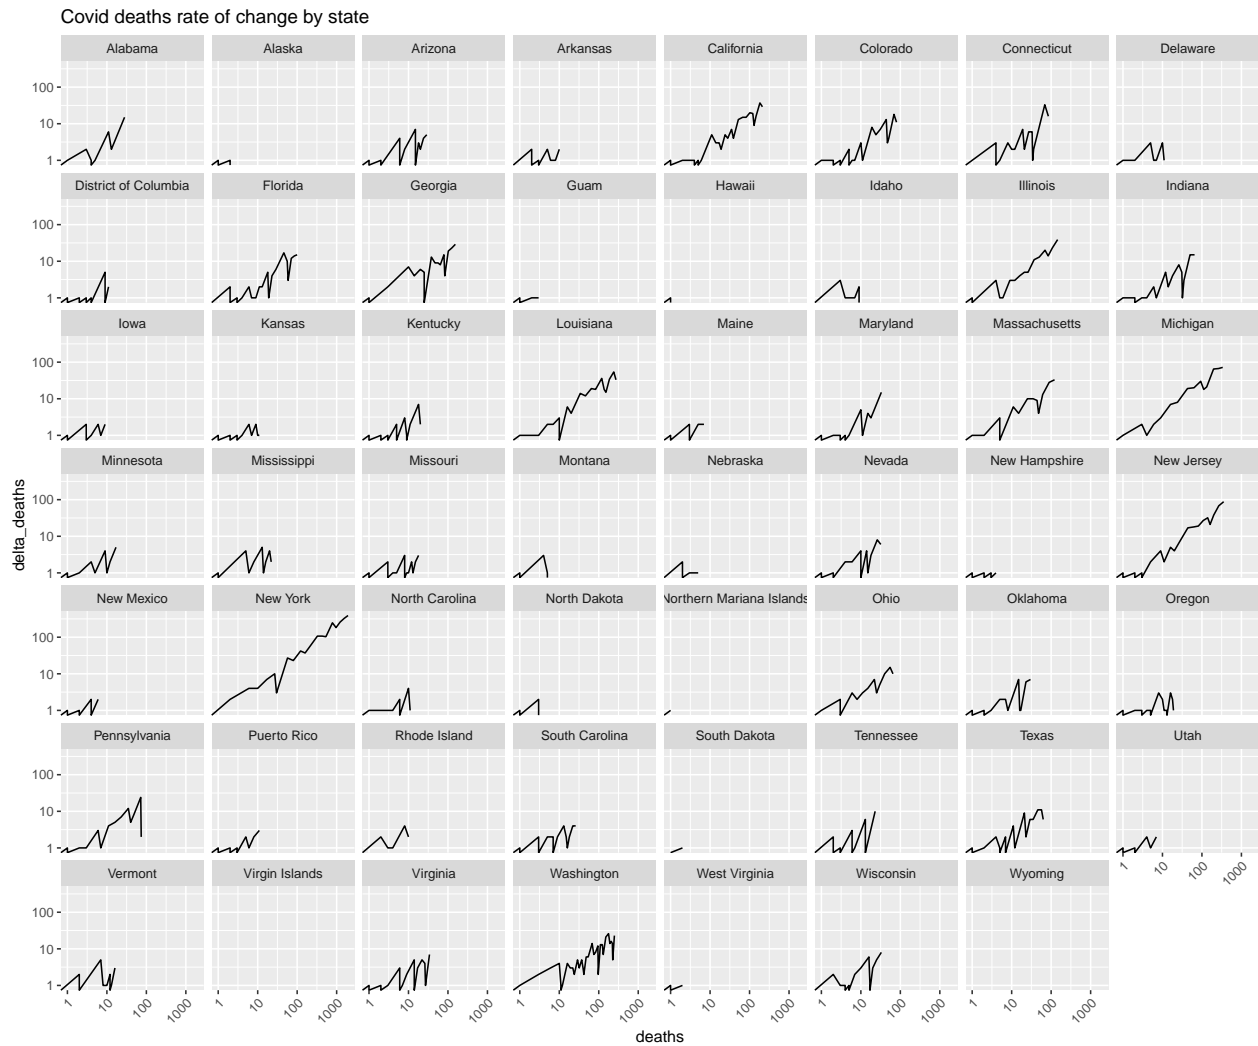

### ### Log of Change Over Cumulative Sum

Linear values are skewed by higher-magnitude values, so use a  $\log(10)$  on each axis. this better fits the exponential nature of the data anyway.

## Log/Log of Cases Over Cumulative Sum

## Log/Log of Deaths over Cumulative Sum

## Weekly Rate of Changes

In order to smooth out the curves in the previous graphs, look at them on a weekly basis.

## Weekly Range of Change of Cases by State

## Weekly Range of Change of Deaths by State

# Washington Counties
