# Change Analysis

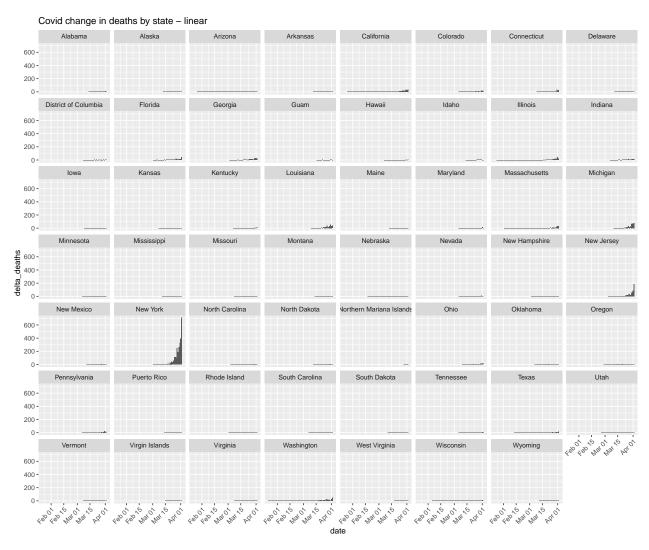

Another experiment to look at rate of change. Idea here is to compare the reported change against the cumulative sum.

## Extract daily changes

#### Daily Cases

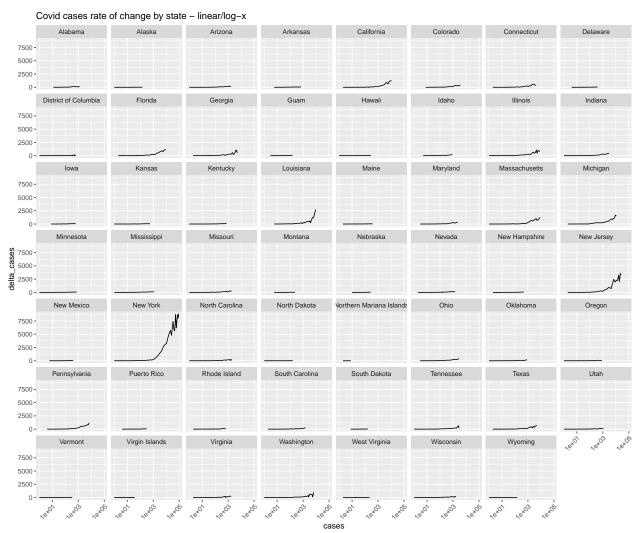

# Daily Deaths

# Change over Cumulative Sum

# Change in Cases over Cumulative Sum

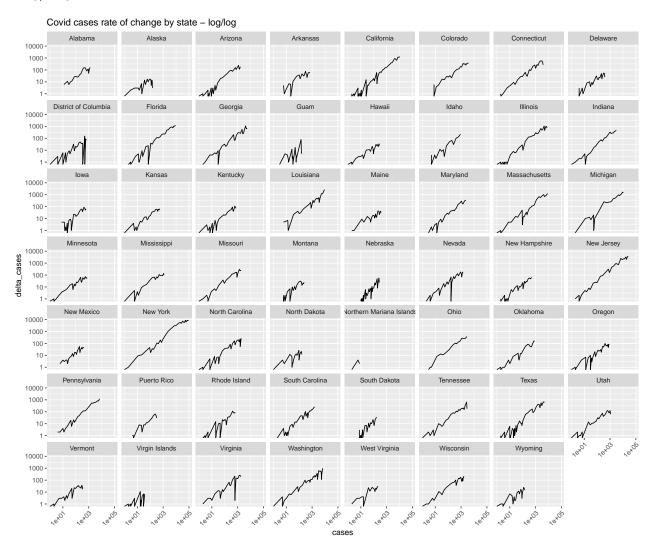

Use the log of the cumulative sum to better scale the values.

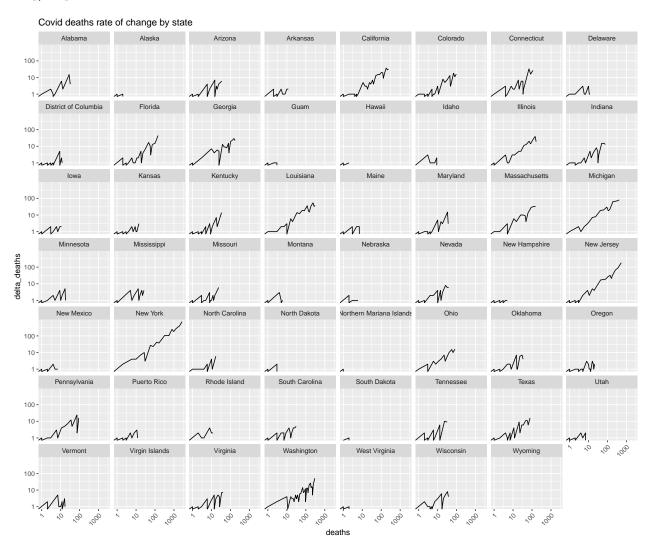

## Log of Change Over Cumulative Sum

Linear values are skewed by higher-magnitude values, so use a log(10) on each axis. this better fits the exponential nature of the data anyway.

#### Log/Log of Cases Over Cumulative Sum

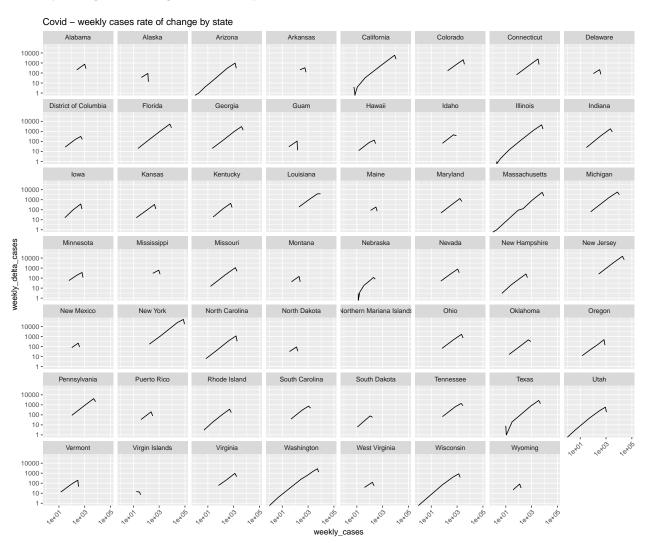

## Log/Log of Deaths over Cumulative Sum

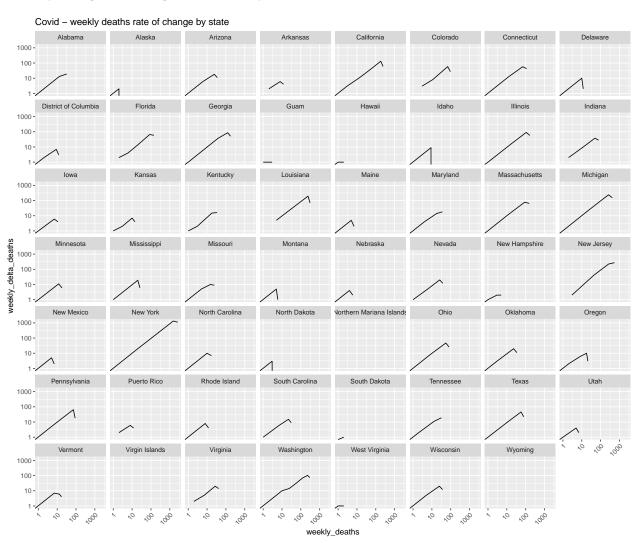

## Weekly Rate of Changes

In order to smooth out the curves in the previous graphs, look at them on a weekly basis.

# Weekly Range of Change of Cases by State

## Weekly Range of Change of Deaths by State

# Washington Counties
