Change Analysis

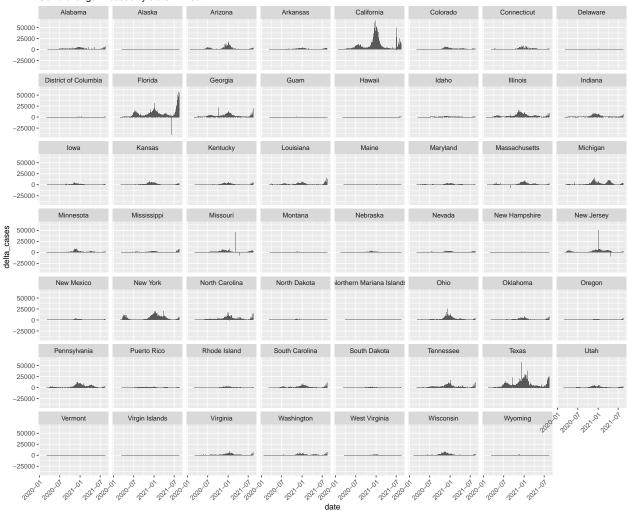

Another experiment to look at rate of change. Idea here is to compare the reported change against the cumulative sum.

Last date for states data is 2021-08-17

Extract daily changes

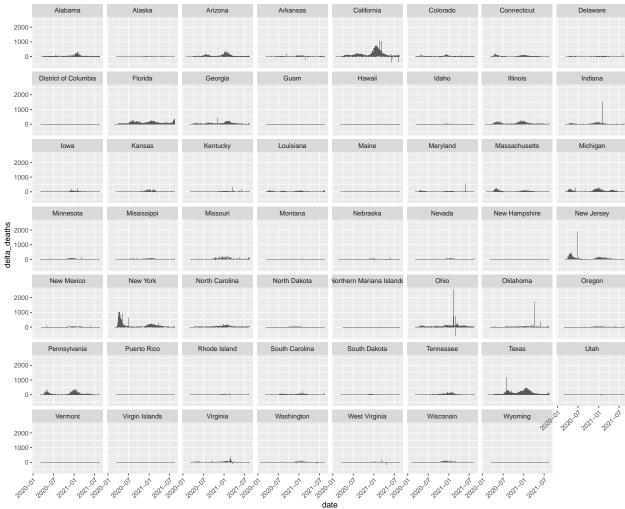

Daily Cases

Daily Deaths

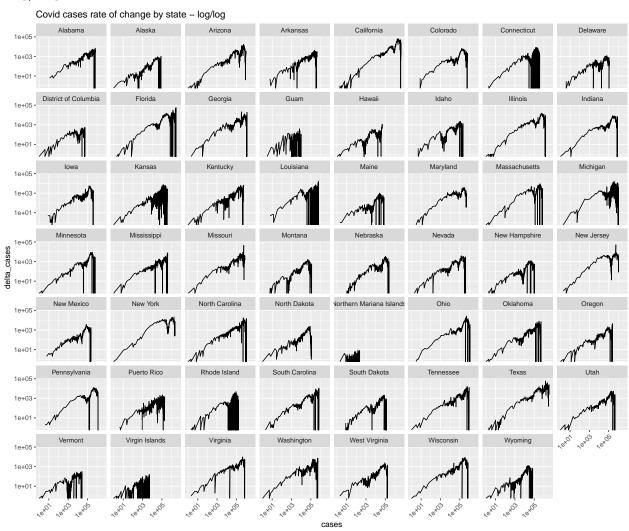

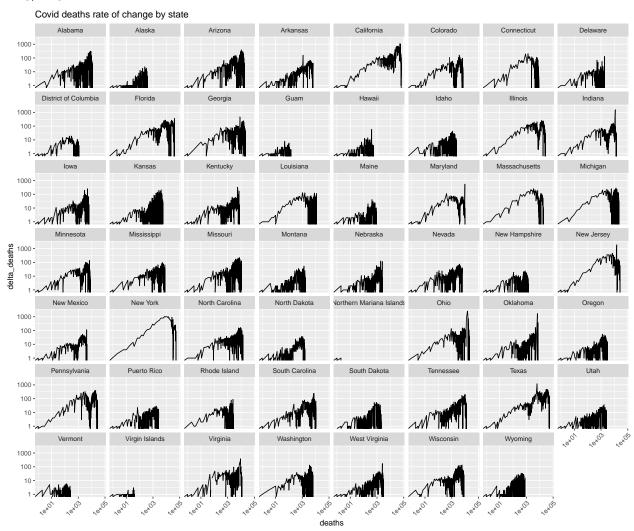

Log of Change Over Cumulative Sum

Linear values are skewed by higher-magnitude values, so use a log(10) on each axis. this better fits the exponential nature of the data anyway.

Log/Log of Cases Over Cumulative Sum

Log/Log of Deaths over Cumulative Sum

Weekly Rate of Changes

In order to smooth out the curves in the previous graphs, look at them on a weekly basis.

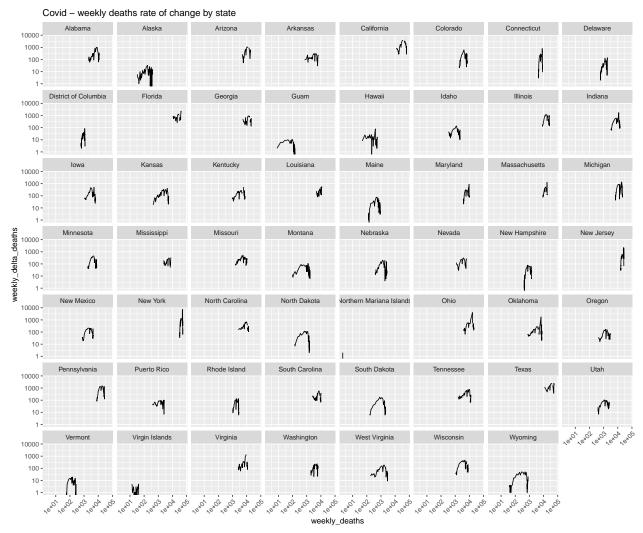

`summarise()` has grouped output by 'state'. You can override using the `.groups` argument.
